CARE OF AFRICAN VIOLETS

Water- Only when the soil is dry on top. According to individual requirement.
 Light- All you can possibly give them without burning the leaves.

Fertilize- Sparingly and only after the soil and roots have been dampened
 with plain water several hours before. We use Hyponex & Dairy Compos

Cleanliness- Spray with clear water regularly. We give ours a bath once a
 week. DO NOT set your plants in the sun until leaves are dry again.

We also spray for any insects that may infest the leaves once
 a month. However, if your plants already have mites, you must
 spray every week. We use NNOR.

STERILIZE all pots, utensils, and soil before using.

We use Fumi-Soil Caps for "In the soil pests" and Lindane for pots,
 Never use water softened by salts or chemicals. Use warm water. Etc.
 Plastic or glazed pots require only about one third as much water as
 clay pots. Do not over-water, The plants will not thrive if kept too dry.
